The ARAD 5™ isn't just another M4-style rifle; it is the pinnacle of our commitment to those who demand more from their gear. Engineered at the request of Israel's most elite military and law enforcement units, the ARAD 5 has already proven its worth on the global stage.

### Key Technical Features

**Semi-Monolithic Upper:** Enables the use of varied optics and thermals while maintaining a rock-solid zero.

**Modular Handguard:** M-LOK rails at the 3, 6, and 9 o'clock positions for maximum versatility.

**IWI QD CamLak System:** Features the same fast, easy barrel-change retention system found in the world-famous Tavor X95 and Tavor 7.

**Short-Stroke Gas Piston:** A highly dependable system with a 2-position gas regulator, ensuring reliability across environments and suppressed/unsuppressed configurations.

**The Barrel:** The contract uses a CHF CL barrel, while this model features a 4150 CMV barrel. These are manufactured using the same process on the same machines as our Zion barrels, which have earned a reputation for exceptional longevity and accuracy.

**The Lower:** The contract lower lacks commonality with MIL-STD parts. We opted to utilize a MIL-STD compatible lower for the US version to ensure users have full access to the aftermarket triggers, grips, and components they prefer.
